

EcoLogic Solutions

clean without compromise

EcoLogic Solutions Inc.'s sole purpose is to introduce the safest, effective and cost competitive cleaning products to mass consumers. Through mass use of safer options, there is a compound, beneficial impact upon the health of the end-user and immediate environment. 100% of our resources are committed to sustainable development and the selling of fully non-hazardous, non-toxic and non-polluting formulas.

EcoLogic Solutions' (ELS) primary concerns are workers' safety and the environment. ELS realizes in order to have success, the products must be effective. Many of these products save operations chemical and employee compensation expenses, and outperform the more toxic standard.

ELS is a full-service manufacturer and distributor that offers over 100 products for many industries, while focusing on three programs: Building Maintenance, Hospitality & Food Service.

Using ELS, one can be assured of getting the most effective and documented Environmentally Preferable Products available in the marketplace.

ELS consultants initially meet with an operation to understand their needs, provide DEEP GREEN™ options, install easy-to-use proportion control systems and fully train, motivate and educate staff (bi-lingual if necessary). All this ensures department executives a savings in time, and a more seamless transition.

Some of our customers include Grand Teton Lodge Company, Starwood Hotels & Resorts, Hilton, Best Western Intl., University of Massachusetts, schools, spas, property management companies and restaurants.

Governmental studies have shown, on average a custodian handles products that create nearly 58 pounds of hazardous waste per year. In the hospitality industry, worker's exposure can be up to 9 times higher. Studies further concluded, approximately 6 out of every 100 custodians receive chemical related injuries on the job per year, averaging a cost of \$725 / claim.

An operation can eliminate a great deal of this hazardous waste, dramatically reduce indoor air pollution and increase workers' safety by converting to some of these environmentally preferable options.

A successful transition to using ELS's DEEP GREEN™ program is a multi-win opportunity for an operation: a win for the end-user, fellow employee, bottom line, community and press.

Today, industries have the opportunity to lead by example and truly clean without compromise™.
